

The Connected Home

Delivering the real fiber experience

We want people to enjoy the real fiber experience

To ensure that, the fiber connectivity needs to be distributed throughout the home. However, homes are different in shape and size, and end-users want different types of services. This means that there is no one-size-fits-all solution to cover the different deployments.

That is why our Connected Home portfolio is built on modularity, to provide your customers with the products that matches their needs and infrastructure. Because, a home is only 'done' when you can ensure the end-user 100% coverage and stability throughout the entire home.

Connected Home portfolio

Wi-Fi 6

Reliable and stable WiFi connectivity, allowing end-users to enjoy the home WiFi they want.

Wi-Fi EasyMesh™

Only Wi-Fi EasyMesh™ ensures that truly one network is created when the WiFi network is expanded in the home.

5400 Mbps

Our products can deliver a very high throughput. Allowing the end-user to experience great WiFi speeds.

Compact gateway & extender

Pulse EX600

The Pulse EX600 is a compact gateway for homes without the need for traditional voice services. Compact, but still two dedicated LAN ports to provide cabled connectivity.

The Pulse EX600 can also function as an extender when connected to a gateway.

Multiport gateway

Pure E600

The Pure E600 is a traditional multiport gateway. Perfect for homes that use multiple wired connected client devices and traditional voice services.

With 4 LAN ports and 2 voice ports it provides maximum cabled connectivity.

All-in-one fiber gateway

FiberTwist 6000-Series

The FiberTwist 6000-Series is perfect for small homes and apartments. The all-in-one gateway connects directly to the fiber (i.e., PON or PtP) via a simple 'Twist'.

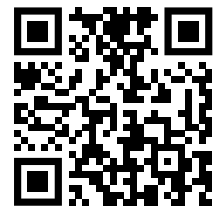

With 4 LAN ports, 2 voice ports and optional CATV, it is a complete gateway.
